

Speed bar replacement lines are delivered without the loop on the free end. The reason is that otherwise one would not be able to mount the new speed line on the riser.

One should put the free end of the line through the pulleys and tie using so called “rescue knot” - that is demonstrated on photos on the bottom.

The line length is universal – fits to all our Dudek's paragliders. The pilot should knot the line such a way, that hook “touches” the upper pulley on the riser while the riser is fully extended.

If the free end is too long, cut it...

...and melt using lighter flame.
